

An A.I. Screener

— Is a necessary, new, on-staff **Competency-Position** that every business/company/organization will-need to optimize productivity and stay competitive during our A.I.-driven Age of Automation.

In the coming days/weeks/years, A.I. will be the major competitor in the majority of the U.S. Workforce.

An A.I. Screener

Analyzes their organization's workflows and creates a **Strategic Plan**.

If the Company is Constructing or Manufacturing Hard goods, the **A.I. Screener** sets up a Workflow as a Critical Path. If the company produces soft goods or a service, the **A.I. Screener** sets up a **Story Board**. Then installs Stepping Stones + Objectives + Check Points that mark the Path of Components or Raw Materials in-the-door; Products/Services out-the-door.

Then the **A.I. Screener** has each-location define and delineate what they specifically do + where their work comes from + where it goes, and what modifications their supplier could make that could make their job easier.

Then the **A.I. Screener** screens each location to ascertain the number/type-of modifications to the product + hard or soft changes, and if the modification involves more than 3 actions/changes. Then decides Employee vs. A.I. => Comparing What A.I. can actually-Do – with-What a typical Human Being or a Human Being with an I.A.P. Rating can-Do that will measurably improve the company's Margins, and How-to implement.

What you should also know is!

The absolute-best Computer-driven A.I. can-do is match the Intellectual capabilities of a *Pre-Puberty Human Child's Cognitive Intelligence* and *Perspectives*.

NOTE: The Left-and-Right Hemispheres of our Gender-based Cerebral Cortex (Our Human Guidance System) don't fully come on-line until the completion of Puberty + 2 years to reach full functionality. Only then are we Human Beings capable of abstract, constructive thought that can-manage our 6-Brains-generated Feelings-based Emotions/Behavior. A Brain is a situation-decision-making physical component of a Human Being's *Intellectual-Ensemble* that has its own specific Responsibilities and Memory Bank System.

A.I. is strictly TASK-oriented and the assigned Task should not have more than 3 optional-CPU-Connections and that A.I.-driven Task will still have a 10%–40% error-factor that can disrupt Productive Workflows and reduce Margins —

Errors that only a Tuned-up Human Intellect can interpret + evaluate + Fix.

Unfortunately, U.S. Universities sanctify **Cognitive Intelligence**, which is the common denominator intelligence of all ambulatory living creatures, and have done their best to dumb-us-Humans-down to their level. Non-Compliance with Cognitive Intelligence is labeled a *Mental Health Problem*, and ostracized from Main Stream Culture. (College Professors and Academic-based Experts have no Common Sense because they have no Real-Time, Real-World Experience that would develop Common Sense.) Can we be Smarter? Absolutely! By **Resurrecting** our now-dormant **Ambient Intelligence**.

NOTE: The inherent-limitations of A.I. are its Binary Coding + Assemble Language, et al., in an Analog World + all Coders are limited by their differing levels of Cognitive Intelligence depending on their Real-Time + Real-World + Free-Will-generating Personal Experience + Coders are unique Human Beings so have different experience-based, Analog/ Value/Reasoning Processes + multiple Coders on the same Process will create varying levels of Common Sense creating variations and errors and untrustworthy conclusions => causing considerable coding Confusion. The CEOs of the non-exploitive Tech Corporations driving the Private Sectors of the Tech World seem to agree.

There are 2 basic types of Thinking among Humans that can be Tested, Evaluated, Compared.

1) **Human's XX Chromosome-built DNA** generates **Cognitive Intelligence** and its Critical Thinking that focuses on: What was, Repetition, Uniformity, Preservation, +++. Cognitive Intelligence dominates our Culture in the USA today — Which is why we are losing.

2) **Human's XY Chromosome-built DNA** generates **Ambient Intelligence** and its Contextual Thinking that focuses on What is — actually; What can-be; What should-be; Adaptation, +++. Unfortunately, in American Schooling, People who don't display Cognitive Intelligence and practice subscription are considered to have Mental Health issues.

We're a One-Room Schoolhouse

Building 21st Century Top-Tier Employment Perspectives and Intellectual Capabilities/Competencies that earn Certification.
